IMPORTANT – PLEASE READ

Radon tests are performed under certain testing conditions listed on page 2 of this application. I/We, the responsible individual(s), understand and will inform all occupants of the dwelling of the conditions of the test. I/we agree to maintain these conditions 12 hours prior to the test and during the complete testing period. Certain weather conditions may affect radon levels in the home, testing is done at the discretion of the licensed professional. I/we understand that certain conditions or results may require further testing.

Non-Interference Radon Survey Agreement

The testing device is not be moved, covered or have its performance altered during the radon survey by anyone. Examples of performance alteration would be covering the detector, moving it to another location during the test period, or opening windows during a short-term test.

Closed-house conditions require that all the windows are kept closed. External and any basement to first floor doors are closed except for normal momentary entering and exiting. Structural openings due to disrepair or structural defects that allow a significant amount of ventilation are repaired to correct their condition before initiation of closed-house conditions.

Heating, air conditioning, and heat recovery ventilators can be operated normally. Operation of dryers, range hoods, and bathroom fans should be kept to a minimum. Overuse of an appliance that exhausts air may influence the final readings.

Whole house fans shall not be operated during the testing period. Portable window fans are removed from the window or sealed in place. Window air conditioning units are only operated in a recirculating mode. If the dwelling contains an air handling system, the air handling system is not set for continuous operation unless the air handling equipment is specifically used for radon control and labeled as such.

Fireplaces or combustion appliances are not to be operated unless they are the primary sources of heat for the dwelling. Ceiling fans, portable dehumidifiers, portable humidifiers, portable air filters and window air conditioners are not operated within twenty feet of the detector.

Closed-house conditions are maintained for twelve hours prior to the start of the radon survey and during the 48 hour minimum testing period.

Testing will only be done if occupant's health and safety are not at risk for these conditions to be met.
